

6.9 Understanding Student Loans

Figure 6.21 College is often paid for through loans. (credit: "Sidewalk Scene in front of Science Building" by IMCBerea College Wikimedia Commons, CC- BY 2.0)

Learning Objectives

After completing this section, you should be able to:

1. Describe how to obtain a student loan.
2. Distinguish between federal and private student loans and state distinctions.
3. Understand the limits on student loans.
4. Summarize the standard prepayment plan.
5. Understand student loan consolidation.
6. Summarize and describe benefits or drawbacks of other repayment plans.
7. Summarize possible courses of action if a student loan defaults.

Obtaining a Student Loan

All college students are eligible to apply for a loan regardless of their financial situation or credit rating. Federal student loans do not require a co-signer or a credit check. Most students do not have a credit history when they begin college, and the federal government is aware of this. However, private loans will generally require a co-signer as well as a credit check. The co-signer will assume responsibility for paying off the loan if the student cannot make the payments.

The first step in applying for student loans is to fill out the **FAFSA** (Free Application for Student Aid). FAFSA determines financial need and what type of loan the student is qualified to obtain. For students who are still dependents on their parent's taxes, the parents also fill out the FAFSA, as their wealth and income impacts what the dependent student is eligible for. Students who cannot demonstrate financial need will also be helped by applying with FAFSA, as it will help guide them to the type of loan most appropriate. The FAFSA must be submitted each year.

 *The FAFSA deadline is the spring of the student's next academic year. The deadline is often in March. Do not allow this deadline to pass.*

As soon as an offer letter from the college is received, the student should start the application process. The college will determine the loan amount needed. Also, there are limits on the amount a student can borrow. There are both yearly limits and aggregate limits. See the table later in this section that outlines the loan limits per school year and in the aggregate.

If the student receives a direct subsidized loan, there is a limit on the eligibility period. The time limit on eligibility depends on the college program into which the student enrolls. The school publishes how long a program is expected to take. The eligibility period is 150% of that published time. For example, if a student is enrolled in a 4-year program, such as a bachelor's degree program, their eligibility period is 6 years, as $1.50(4) = 6$. Therefore, the student may receive direct

subsidized loans for a period of 6 years.

Types and Features of Student Loans

Once a tuition statement is received, and all the non-loan awards are analyzed that are applicable to the costs of college (such as scholarships and grants), there still may be quite of bit of an expense to attend college. This difference between what college will cost (including tuition, room and board, books, computers) and the non-loan awards received is the **college funding gap**.

EXAMPLE 6.81

College Funding Gap

Ishraq receives her award and tuition letter from the college she wants to attend. Her tuition, fees, books, and room and board all come to \$24,845 for the year. Her non-loan awards include an instant scholarship from the school for \$7,500, a scholarship she earned for enrolling in a STEM program for \$3,750, and a \$1,000 scholarship from her church. What is Ishraq's college funding gap?

Solution

Her awards total to \$12,250. Her cost to attend is \$24,845. Her college funding gap is then $\$24,845 - \$12,250 = \$12,595$. She will need to find \$12,595 in funding.

YOUR TURN 6.81

1. Yuan-Teng receives his award and tuition letter from the college he wants to attend. His tuition, fees, books, and room and board all come to \$34,845 for the year. His non-loan awards include an instant scholarship from the school for \$17,500, three scholarships he earned from sources he found online, which total \$5,600, and a \$2,000 scholarship from his employer. What is Yuan-Teng's college funding gap?

There are several loan types, which basically break down into four broad categories: subsidized loans, unsubsidized loans, PLUS loans, and private loans. These loans are meant to fill the college funding gap.

Federal **subsidized loans** are backed by the U.S. Department of Education. These loans are intended for undergraduate students who can demonstrate financial need. Subsidized federal loans, including Stafford loans, defer payments until the student has graduated. During the deferment, the government pays the interest while the student is enrolled at least half-time. These loans are generally made directly to students. However, there are restrictions on how the money can be used. It can only be used for tuition, room and board, computers, books, fees, and college-related expenses. Interest rates are not based on the financial markets but determined by Congress. Federal loans are backed by the Department of Education.

Federal **unsubsidized loans**, including unsubsidized Stafford loans, are available for undergraduate and graduate students who cannot demonstrate financial need. If the student meets the program requirements, they are automatically approved. The student is not required to pay these loans during their time in college (enrolled at least half-time). However, the interest rate is generally higher and there is no deferment period, as with subsidized loans. Interest begins accruing as soon as the money is disbursed.

 *The immediate accrual of interest means the balance of the loan grows as the student attends school. A loan that was for \$10,000 can grow past \$13,000 over five years of college. Some advisors tell students to pay the interest portion of the loan while it is deferred to prevent this growth of debt.*

Parent Loans for Undergraduate Students (PLUS) are federal loans made directly to parents. They are available even if parents are not deemed financially needy. A credit check is performed and approval is not automatic. The limit to what parents can borrow from a PLUS loan each year is still the college funding gap, but the aggregate of the PLUS loans does not have a limit. This means the PLUS loan can cover whatever is left in the funding gap once all other aid and loans are applied. Payments do not begin until the student is out of school, but interest begins to accrue the moment funds are disbursed. Because the parents take out the loan, the parents are responsible for paying back the loan.

Private student loans are backed by a bank or credit institution and require a credit check, and interest rates are variable. As private loans are not subsidized by the government, no one pays the interest but the borrower. The student

does not have to start repaying the loan until after graduation, but interest starts to accrue immediately. This loan has fewer repayment options, more fees and penalties, and the loan cannot be discharged through bankruptcy. Many students need a co-signer to acquire a private loan. Like PLUS loans, private student loans can cover whatever is left in the funding gap once all other aid and loans are applied

Student loans, in general, have a term of 10 years, that is, the loans are paid back over 10 years. This can vary, but 10 years is the standard.

?? WHO KNEW?

School-Channel Loans and Direct-to-Consumer Loans

Private loans can fall into one of two categories: school-channel loans and direct to consumer loans. **School-channel loans** are disbursed directly to the school. The school verifies the loan does not exceed the cost to attend school. **Direct-to-consumer loans** do not have the verification process. Those proceeds are sent directly to the borrower. They are processed more quickly, but often have higher interest rates.

▶ VIDEO

[Types of Student Loans \(https://openstax.org/r/Student_Loans\)](https://openstax.org/r/Student_Loans)

Limits on Student Loans

As mentioned earlier, there are limits to how much a student can borrow, per year and in total. The following table shows a general breakdown of the amounts the federal government and private lenders will lend. Amounts are based on level of need and whether the student is a dependent or an independent student. Independent students include those who are at least 24 years old, married, a professional, a graduate student, a veteran, a member of the armed forces, an emancipated minor, or an orphan. The amounts shown are as of this writing in 2022.

Year	Dependent Students Maximum Amounts	Independent Students Maximum Amounts
First-Year Undergraduate	\$5,500 but no more than \$3,500 may be in subsidized loans	\$9,500 but no more than \$3,500 may be in subsidized loans
Second-Year Undergraduate	\$6,500 but no more than \$4,500 may be in subsidized loans	\$10,500 but no more than \$4,500 in subsidized loans
Third Year and Additional Years	\$7,500 but no more than \$5,500 may be in subsidized loans	\$12,500 but no more than \$5,500 may be in subsidized loans
Graduate and Professional	Not applicable	\$20,500 in unsubsidized loans
Limits	\$31,000 but no more than \$23,000 in subsidized loans	\$57,500 for undergraduates but no more than \$23,000 in subsidized. \$138,500 for graduate or professional but no more than \$65,500 may be subsidized loans.

Check out this [Edvisors page on the limits of student borrowing \(https://openstax.org/r/loan_limits\)](https://openstax.org/r/loan_limits) to learn more!

EXAMPLE 6.82**Loan for Year 5 of College**

Efraim is a dependent undergraduate student enrolled in a biology program. He's about to attend for the fifth year. In year 1 he took out \$5,000 in federal subsidized and unsubsidized loans, in year 2 he took out \$6,400 in federal subsidized and unsubsidized loans, in years 3 and 4, he took out the maximum federal subsidized and unsubsidized loans amounts. He needs federal subsidized and unsubsidized loans for his fifth year of school. How much can he obtain in federal subsidized and unsubsidized student loans?

 Solution

The sum of his previous loans is $\$5,000 + \$6,400 + \$7,500 + \$7,500 = \$26,400$. The limit for federal subsidized and unsubsidized loans is \$31,000, so in year 5 he can get student loans in the amount of $\$31,000 - \$26,400 = \$4,600$.

 YOUR TURN 6.82

1. Tiana is an independent college student entering the sixth and final year of her engineering program. In the previous years, she took out student loans of \$5,500, \$8,470, \$10,000, \$7,890, and \$11,900. She needs a loan to finish her final year. How much in federal subsidized and unsubsidized student loans can she obtain?

Putting this all together, we have a way to determine the student loans needed for a student to attend college.

- First, determine the funding gap. If the student or family can cover the gap, then no loans are necessary.
- Second, determine how much in federal subsidized and unsubsidized student loans can be taken out. If the total federal loans available is more than the funding gap, no other loans are needed.
- Third, if the federal subsidized and unsubsidized loans do not cover the gap, PLUS and private student loans can be taken out to cover the remainder of the gap.

At each step, if the student and family can cover some or all of the gap, they can do so without taking out a loan.

EXAMPLE 6.83**College Funding Gap and PLUS and Private Student Loans**

Olivia receives her award and tuition letter from the college she wants to attend. Her tuition, fees, books, and room and board all come to \$44,845 for her second year. Her non-loan awards include an instant scholarship from the school for \$13,500, a scholarship she earned for enrolling in an engineering program for \$5,750, and a \$2,000 scholarship from her parent's workplace. For her first year, what is Olivia's college funding gap? How much can Olivia borrow in federal subsidized and unsubsidized student loans? Once Olivia takes out her maximum subsidized and unsubsidized federal student loans, how much will have to be paid for using PLUS and private student loans?

 Solution

Her awards total to \$21,250. Her cost to attend is \$44,845. Her college funding gap is then $\$44,845 - \$21,250 = \$23,595$. The maximum in federal student loans that Olivia can borrow is \$6,500 in year 2. The remaining funding gap is $\$23,595 - \$6,500 = \$17,095$. Private student loans, PLUS loans, or other sources must be used to cover this gap.

 YOUR TURN 6.83

1. Makenzy receives her award and tuition letter from the college she wants to attend. Her tuition, fees, books, and room and board all come to \$39,200 for her third year. Her non-loan awards include an instant scholarship from the school for \$19,500, three scholarships she earned from sources she found online which total \$3,850, and a \$5,000 scholarship from her employer. What is Makenzy's college funding gap? How much can Makenzy borrow in federal subsidized and unsubsidized student loans? Once she takes out her maximum subsidized and unsubsidized federal student loans, how much will Makenzy and her family have to pay using PLUS and private student loans?

Student Loan Interest Rates

Student loans are first and foremost loans. Students will pay them back and will pay interest. In the fall of 2022, the federal student loan interest rate was 4.99%. Private student loans rates ranged between 3.22% and 13.95%. Finding the lowest interest rate you can helps with the payments, and especially helps if the loan is not federally subsidized. Remember, if the loan is not federally subsidized, the student is on the hook for the interest that is accumulating with the loan.

Interest Accrual

The interest on student loans begins as soon as the loan is disbursed (paid to the borrower). When the loan is federally subsidized, the government pays that interest for the student. This means the loan for a subsidized loan of \$3,000 is still a loan for \$3,000 when the student graduates. However, if the loan is not federally subsidized, the student is responsible for the interest that accrues on the loan. The \$3,000 loan from year 1 of college is now a loan for more due to that added interest. The interest on that loan grew while the student was in college. The formula for growth of the loan's balance is the same as compound interest formula from [Compound Interest](#), $A = P\left(1 + \frac{r}{n}\right)^{nt}$.

EXAMPLE 6.84

Denise takes out unsubsidized student loan, in August, in her first year of college for \$2,000. She manages an interest rate of 8%. She graduates after her fifth year of college, in May. She does not pay the interest on the loan during her time in college. What is the balance of her first year loan in May of her graduation year?

Solution

The principal of the loan is \$2,000. Her interest rate is 8%. Since student loans are typically paid monthly, there are 12 periods per year. Since the time she has had the loan is not in years, we will use the number of months for the value of nt in the formula. She has had the loan for 4 years and 9 months, meaning 57 period have passed. Substituting those values into the formula and calculating, we find her balance in May of her graduating year is

$$A = P\left(1 + \frac{r}{n}\right)^{nt} = \$2,000\left(1 + \frac{0.08}{12}\right)^{57} = \$2,000(1.06)^{57} = \$2,920.89.$$

YOUR TURN 6.84

1. Priya takes out unsubsidized student loan, in August, in her first year of college for \$2,000. She manages an interest rate of 7%. She graduates after her sixth year of college, in May. She does not pay the interest on the loan during her time in college. What is the balance of her first year loan in May of her graduation year?

The Standard Repayment Plan

There are various repayment plans available. The one most likely to apply to a student loan is the **standard repayment plan**, which is available to everyone. Borrowers pay a fixed amount monthly so the loan is paid in full within 10 years. Consolidated loans, discussed later in this section, also qualify for the standard repayment plan, and may allow the payoff period to range from 10 to 30 years. Direct subsidized and unsubsidized loans, PLUS loans, and federal Stafford loans are eligible.

Since these are loans, they are paid back with interest. As with most installment loans, their payments are due monthly. The formula for paying back these loans is the same as the formula used for paying loans in [The Basics of Loans](#):

$$pmt = \frac{P \times (r/n) \times (1 + r/n)^{n \times t}}{(1 + r/n)^{n \times t} - 1}.$$

Using that formula, we can calculate how much the payment is for a student loan. Remember that all loan payments are rounded up to the next penny.

EXAMPLE 6.85

Standard Repayment Plan

Find the payment for the following student loans using the standard repayment plan:

1. Loan is \$3,500, interest is 4.99%
2. Loan is for \$6,200, interest is 6.75%

 Solution

1. The principal is $P = \$3,500$ and the rate is $r = 0.0499$. Since this is the standard repayment plan, there are $n = 12$ payments per year for 10 years. Substituting those values into $pmt = \frac{P \times (r/n) \times (1 + r/n)^n \times t}{(1 + r/n)^n \times t - 1}$ and calculating gives a monthly payment of

$$\begin{aligned}
 pmt &= \frac{P \times (r/n) \times (1 + r/n)^n \times t}{(1 + r/n)^n \times t - 1} \\
 &= \frac{\$3,500 \times (0.0499/12) \times (1 + 0.0499/12)^{12 \times 10}}{(1 + 0.0499/12)^{12 \times 10} - 1} \\
 &= \frac{\$3,500 \times (0.004158\bar{3}) \times (1.004158\bar{3})^{120}}{(1.004158\bar{3})^{120} - 1} \\
 &= \frac{\$23.9469911276}{0.645370131872} \\
 &= \$37.11
 \end{aligned}$$

2. The principal is $P = \$6,200$ and the rate is $r = 0.0675$. Since this is the standard repayment plan, there are $n = 12$ payments per year for 10 years. Substituting those values into $pmt = \frac{P \times (r/n) \times (1 + r/n)^n \times t}{(1 + r/n)^n \times t - 1}$ and calculating gives a monthly payment of

$$\begin{aligned}
 pmt &= \frac{P \times (r/n) \times (1 + r/n)^n \times t}{(1 + r/n)^n \times t - 1} \\
 &= \frac{\$6,200 \times (0.0675/12) \times (1 + 0.0675/12)^{12 \times 10}}{(1 + 0.0675/12)^{12 \times 10} - 1} \\
 &= \frac{\$6,200 \times (0.005625) \times (1.005625)^{120}}{(1.005625)^{120} - 1} \\
 &= \frac{68.3662233426}{0.960321816275} \\
 &= \$71.20
 \end{aligned}$$

 YOUR TURN 6.85

Find the payment for the following student loans using the standard repayment plan:

1. Loan is \$7,800, interest is 4.99%
2. Loan is for \$11,450, interest is 7.75%

EXAMPLE 6.86

Standard Repayment Plan for an Unsubsidized Loan

Erson has a balance of \$8,132.55 when he starts paying off the 8.6% unsubsidized student loan he took out in his third year. How much are his payments if the term for his loan is the standard 10 years?

 Solution

Using the payment formula, $pmt = \frac{P \times (r/n) \times (1 + r/n)^n \times t}{(1 + r/n)^n \times t - 1}$, with $P = \$8,132.55$, $r = 0.086$, $t = 10$ and $n = 12$, we calculate that his monthly payment will be

$$\begin{aligned}
 pmt &= \frac{P \times (r/n) \times (1 + r/n)^n \times t}{(1 + r/n)^n \times t - 1} \\
 &= \frac{\$8,132.55 \times (0.086/12) \times (1 + 0.086/12)^{12 \times 10}}{(1 + 0.086/12)^{12 \times 10} - 1} \\
 &= \frac{\$8,132.55 \times (0.0071\bar{6}) \times (1.0071\bar{6})^{120}}{(1.0071\bar{6})^{120} - 1} \\
 &= \frac{137.310962384}{1.35592393158} \\
 &= \$101.27
 \end{aligned}$$

> YOUR TURN 6.86

1. Kathleen has an unsubsidized student loan from graduate school. She begins to pay it back in the September after she earned her doctorate. The balance at that point was \$22,666.21. The interest rate on the loan is 6.7%. How much are her payments if she pays it off in the standard of 10 years?

Student Loan Consolidation

When a student graduates, they may have multiple different student loans. Keeping track of them and paying them off separately can be a burden. Instead, these loans can be consolidated into a single loan. If they are federal loans the combination is called **federal consolidation**. Combining private loans is often referred to as **refinancing**. Refinancing, or **private consolidation**, can be used to combine both private and federal student loans. Be aware that consolidated federal loans may still be subject to the rules and protections that govern subsidized loans. Refinancing loans, private or federal, are no longer subject to those rules and guidelines. Check out this [Experian article about consolidation and refinancing \(https://openstax.org/r/my_student_loans\)](https://openstax.org/r/my_student_loans) for more detail.

In consolidation of federal direct student loans, the interest rate is the weighted average of the interest rates on the subsidized loans. This means the interest rate remains the same. However, if the term is extended, then the student will pay back more over time than if they did not extend the loan term.

In refinancing, it is possible to obtain a lower interest rate on the student loans, which may lower how much is paid per month and lower the total paid back over time. These monthly payments are calculated using the same formula as for any other loan payment, $pmt = \frac{P \times (r/n) \times (1 + r/n)^n \times t}{(1 + r/n)^n \times t - 1}$. The term of the refinanced loan may also be changed, which would also impact the payment per month.

In either case, consolidating or refinancing, the monthly financial burden on the student can decrease. However, if the term is extended, the total amount repaid may increase.

EXAMPLE 6.87

Federal Loan Consolidation and Interest Rates

Ernest has four federal student loans that he wants to consolidate. He combines them into one loan. What is the maximum Ernest can reduce the interest rate by?

✓ Solution

Consolidating subsidized loans has no impact on the interest rate of the loans, so the maximum that the interest rate can be reduced is 0%.

> YOUR TURN 6.87

1. Ryann has five federal student loans that he wishes to consolidate. He wants to extend the term to 15 years. How does this impact Ryann's interest rate? The total Ryann pays back?

EXAMPLE 6.88**Payments for Consolidated Student Loans**

Brianna consolidates her student loans, some federal and some private, into a single refinanced student loan with a principal of \$27,800. The interest rate that Brianna received was 8.375%. If Brianna's new term is 15 years, how much are her payments per month?

✓ Solution

The principal is $P = \$27,800$ and the rate is $r = 0.08375$. Since the payments are monthly, $n = 12$. The loan term is for 15 years, so $t = 15$ years. Substituting those values into $pmt = \frac{P \times (r/n) \times (1 + r/n)^{n \times t}}{(1 + r/n)^{n \times t} - 1}$ and calculating gives a monthly payment of

$$\begin{aligned} pmt &= \frac{P \times (r/n) \times (1 + r/n)^{n \times t}}{(1 + r/n)^{n \times t} - 1} \\ &= \frac{\$27,800 \times (0.08375/12) \times (1 + 0.08375/12)^{12 \times 15}}{(1 + 0.08375/12)^{12 \times 15} - 1} \\ &= \frac{\$6,200 \times (0.0069791\bar{6}) \times (1.0069791\bar{6})^{180}}{(1.0069791\bar{6})^{180} - 1} \\ &= \frac{\$678.477992464}{2.49693370968} \\ &= \$271.73 \end{aligned}$$

> YOUR TURN 6.88

1. Brian consolidates his federal student loans into one loan at 4.99%. The consolidated balance is \$20,340, and he extends the term to 12 years. What are Brian's monthly payments for the consolidated loan?

Other Repayment Plans

There are various other repayment plans available to students. Plans other than the standard repayment plan typically require the student to meet certain criteria. The following plans are independent of student income, but may make early payments easier.

- **Graduated repayment plans** are plans where the amount of payments gradually increases so that the loan is paid off in 10 years, or within 10 to 30 years for consolidated loans. Payments start off small and increase approximately every 2 years. Almost all loan types are eligible, including direct subsidized and unsubsidized loans, Stafford loans, PLUS loans, and consolidated loans.
- **Extended repayment plans** are available to the direct loan borrower if the outstanding direct loans are over \$30,000. The payments, fixed or graduated, are designed so that the loans are satisfied within 25 years. Eligible loans include both direct subsidized or unsubsidized loans, Stafford loans, PLUS loans, and consolidated loans.

If student earnings are such that the standard, graduated, or extended repayment plans are unaffordable, then one can make payments that are based on their **discretionary income**. Discretionary income is federally defined to be the difference between (adjusted) gross income and 150% of the poverty guideline for location and family size. This discretionary income then depends on where one lives (contiguous United States or Hawaii or Alaska) and how many dependents one has. If married, a spouse's income will be included in the adjusted gross income. Understanding discretionary income is necessary to understand how income driven payments plans work.

EXAMPLE 6.89**Discretionary Income**

1. The poverty guideline for a single person living in Arkansas, is \$12,000. If Harriet is a single person in Arkansas with a (adjusted) gross income of \$23,500, what is her discretionary income?
2. For California, the poverty guideline for a person with four people in the household is \$27,750. If such a person has a (adjusted) gross income of \$48,600, what is their discretionary income?

✓ **Solution**

1. The poverty guideline for a single person in Arkansas is \$12,000. 150% of that guideline value is $1.5 \times \$12,000 = \$18,000$. The gross income that Harriet makes over that \$18,000 is her discretionary income. That gross income is \$23,500, so her discretionary income is $\$23,500 - \$18,000 = \$5,500$.
2. The poverty guideline for a household of four in California is \$27,750. 150% of that guideline value is $1.5 \times \$27,750 = \$41,625$. The gross income that Harriet makes over that \$41,625 is her discretionary income. That gross income is \$48,600, so her discretionary income is $\$48,600 - \$41,625 = \$6,975$.

> **YOUR TURN 6.89**

1. The poverty guideline for two-person household in Hawaii is \$21,060. If Jamie lives in a two-person household and has a gross income of \$36,900, what is his discretionary income?

The following plans all depend on discretionary income.

- **Pay As You Earn (PAYE) repayment plans** have monthly payments that are 10% of discretionary income based on a student's updated income and family size. If a borrower files a joint tax return, their spouse's income and debt may also be considered. Eligible loans include direct subsidized and unsubsidized loans, PLUS loans made to students, and some consolidated loans. These loans are forgiven (student does not pay the remaining balance) after 20 years of monthly payments if they were direct federal student loans.
- **Revised Pay As You Earn (REPAYE) repayment plans** have payment amounts that are based on income and family size and calculated as 10% of discretionary income. Eligible loans include direct subsidized and unsubsidized loans, direct PLUS loans, and some consolidated loans. These loans are forgiven, that is, the student does not pay more, after 20 or 25 years, provided they were direct federal student loans.
- **Income-Based Repayment (IBR) plans** sound like a few of the others and there are similarities in all of them. The payments are either 10% or 15% of discretionary income, but this plan is meant for those with a relatively high debt. Every year, income and family size must be updated, and payments are calculated based on those figures. Eligible loans include direct subsidized and unsubsidized loans, Stafford loans, and PLUS loans made to students, but not PLUS loans made to parents.
- **Income-Contingent Repayment (ICR) plans** have payments that are either 20% of discretionary income or whatever would be paid if a student were on a fixed payment plan for more than 12 years, whichever is less. Eligible loans include direct subsidized and unsubsidized, PLUS loans to students, and consolidated loans.

There are many similarities among these repayment plans, and it is easy to misunderstand the nuances of each. Therefore, be careful entering into any type of repayment contract until you fully understand all the details and repercussions of the plan you choose. For more detail, see [this nerdwallet article "Income-Driven Repayment: Is It Right for You?"](https://openstax.org/r/driven_repayment_right) to learn more (https://openstax.org/r/driven_repayment_right)!

EXAMPLE 6.90

Payments for a REPAYE Program

Warren qualifies for a REPAYE payment plan. His gross income is \$32,700. He is single and live in Montana, so the federal poverty guideline for Warren is \$12,000.

1. What is Warren's discretionary income?
2. Under the REPAYE plan, he pays 10% of his discretionary income, but monthly. How much are Warren's REPAYE payments?

✓ **Solution**

1. The poverty guideline for Warren is \$12,000. 150% of that guideline value is $1.5 \times \$12,000 = \$18,000$. The gross income that Warren makes over that \$18,000 is his discretionary income. That gross income is \$32,700, so his discretionary income is $\$32,700 - \$18,000 = \$14,700$.
2. 10% of Warren's discretionary income is $0.1 \times \$14,700 = \$1,470$. He pays monthly, so his monthly payments are \$1,470 divided by 12, or \$122.50 per month.

YOUR TURN 6.90

Lauren, a Missouri resident, qualifies for a REPAYE payment plan. Her gross income is \$39,200. She has one child, so there are two people in her household. The federal poverty guideline for Lauren is \$18,310.

1. What is Lauren's discretionary income?
2. Under the REPAYE plan, she pays 10% of her discretionary income, but monthly. How much are Lauren's REPAYE payments?

Using income to determine payments initially seems excellent. However, if there is no forgiveness at the end of the loan, then the income driven payment plans can cause problems. For one, your payment may not be sufficient to cover the interest rate of your loans. In that case, your loan balance actually *increases* as you make your payments. Eventually, you are paying for not only your original loan balance, but interest that has been growing and compounding over time. Also, if the loan term is extended, you may pay more, perhaps a lot more, money over time. You may find yourself in the position of paying these loans for decades.

With those possible drawbacks, great care must be taken to avoid large problems down the line.

Student Loan Default and Consequences

The first day a payment is late, the account becomes **delinquent**. After 90 days, this delinquency is reported to the credit bureaus, and goes into **default**. This is serious, as now a credit score is affected, meaning that it will be harder to buy a car, a home, get a credit card, or a cell phone. Even renting an apartment may be a task not easily overcome. The default rate for students who do not complete their degree is three times higher than for students who do.

Further, defaulting on a student loan may mean that the borrower loses eligibility for repayment plans, as the balance and any unpaid interest may become due immediately, and any tax refunds may be withheld and applied to the loan, and wages may be garnished. One should immediately contact your loan servicer and try to make other arrangements for repayment if this situation becomes apparent, as different repayment plans are available, if actions are taken quickly.

There are several options that may be open to avoid defaulting. One is called **rehabilitation**, or is the process in which a borrower may bring a student loan out of default by adhering to specified repayment requirements, and the other is consolidation. Certain criteria must be met to enter these programs.

Both of these options are detailed, including the criteria required for eligibility, on the [studentaid.gov loan management page \(https://openstax.org/r/default_get_out\)](https://openstax.org/r/default_get_out).

Professionals advise hiring an attorney if one of these paths is chosen.

59. What is the limit on the total in federal subsidized and unsubsidized loans that can be borrowed for an undergraduate degree?
60. If a student takes out a private student loan for \$9,800 at 5.99% interest but does not begin paying it back for 66 months, how much is then owed on the loan?
61. How long is the standard repayment plan for student loans?
62. How much of a student's discretionary income is paid for student loans under the REPAYE payment plan?

SECTION 6.9 EXERCISES

1. What form must be filled out before applying for a student loan?

2. What two issues limit the amount of a federal subsidized or unsubsidized student loan a student can take out?
3. What is the limit to the number of years a student can take out a student loan?
4. What types of student loans have deferred payments and do not accrue interest?
5. Which type of student loan is made directly to parents?
6. Which types of student loans require a credit check?
7. What is the limit on the total amount borrowed in federal subsidized and unsubsidized student loans for an independent undergraduate student?
8. What is the limit on subsidized student loans in the third year of an undergraduate program if the student is a dependent student?
9. What is the maximum allowed to be borrowed on a PLUS loan?
10. What is the maximum allowed to be borrowed on a private student loan?
11. What is the current interest rate on federal subsidized loans?
12. What feature does a graduated payment plan have?
13. If a student is struggling with paying back their student loans, what can the student do?
14. When a student consolidates federal subsidized and unsubsidized loans, does the interest rate change? Does the term of the loan change?
15. If a person with federal subsidized and unsubsidized loans enters a pay as you earn program (PAYE), how long will the person pay on their student loans?
16. How long is it between the time a person is delinquent on a student loan and being in default on the student loan?
17. What is discretionary income?
18. What are the two remedies if a borrower default on their student loans?
19. Toni's total cost to attend college including all fees, books, and room and board is \$18,450. If Toni receives \$5,500 in an instant scholarship from the college and has \$2,175 in scholarships, what is Toni's funding gap?
20. Arthur's total cost to attend college including all fees, books, and room and board is \$31,500. If Arthur receives \$13,500 in an instant scholarship from the college and has \$3,475 in private scholarships, what is Arthur's funding gap?
21. Amelia is an independent student in her fourth year of an urban studies undergraduate degree. What is the maximum she can borrow in federal subsidized and unsubsidized student loans that year?
22. Yaroslav is a dependent student in his second year of an undergraduate psychology program. What is the maximum that he can borrow in federal subsidized and unsubsidized student loans that year?
23. Toni's total cost to attend her third year of undergraduate school, including all fees, books, and room and board, is \$18,450. Toni receives \$5,500 in an instant scholarship from the college and has \$2,175 in scholarships. She is a dependent student. After receiving the maximum federal student loans (subsidized and unsubsidized), and without her parents taking out a PLUS loan, how much will she need to borrow in private student loans to cover the funding gap?
24. Arthur's total cost to attend his second year of his undergraduate program in data science, including all fees, books, and room and board, is \$31,500. Arthur receives \$13,500 in an instant scholarship from the college and has \$3,475 in private scholarships. He is a dependent student. After receiving the maximum federal student loans (subsidized and unsubsidized), and without his parents taking out a PLUS loan, how much will he need to borrow in private student loans to cover the funding gap?
25. Nantumbwe takes out a private student loan for \$7,950 in her second year of her undergraduate health administration program. She begins paying her loan after 39 months. If her interest rate was 8.75%, how much is her balance when she begins to pay off her loan?
26. Cameron takes out a private student loan for \$11,385 in their third year of their undergraduate communications program. They begin paying their loan after 27 months. If Cameron's interest rate was 9.125%, how much is their balance when they begin to pay off the loan?
